Case Study 22: Movies Review and Rating Website

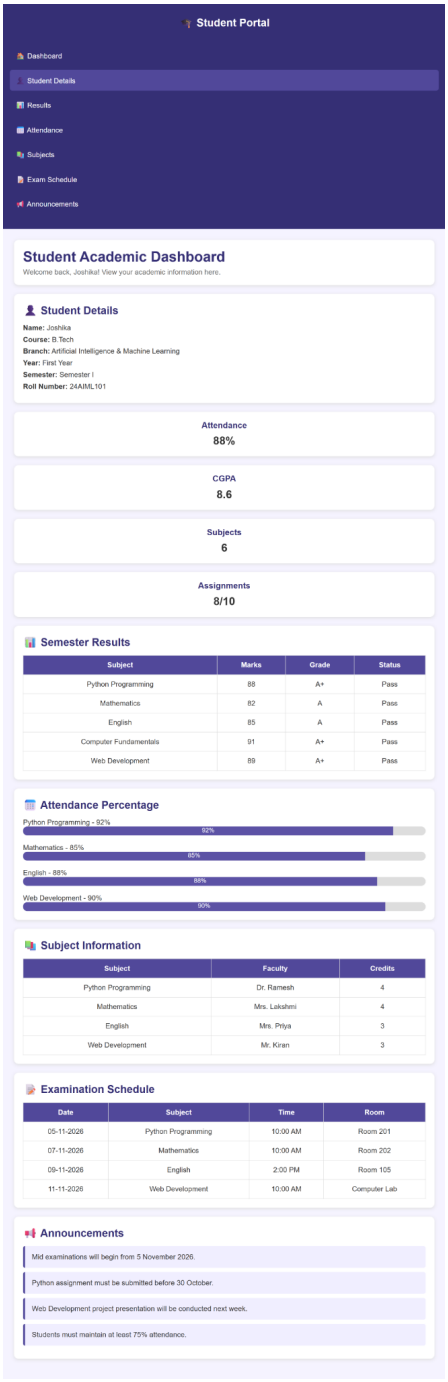

The Movies Review and Rating Website helps users explore movies from different genres and view useful information before selecting a movie. It includes movie posters, release years, ratings, cast details, short descriptions, genres, and critic reviews. Sections such as Explore Genres and Top Movie Picks make browsing simple. The dark cinema-style design and organized movie cards create an attractive interface. This case study demonstrates the use of HTML and CSS to present entertainment information clearly and effectively.

Case Study 4: Student Academic Dashboard Website

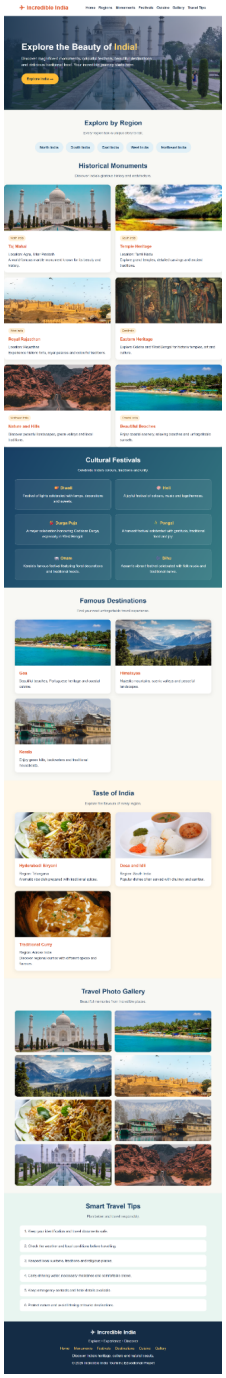

The Student Academic Dashboard Website presents important student information in one organized interface. It displays student details, semester results, attendance percentages, subject information, examination schedules, assignments, and announcements. Tables, progress bars, cards, and sidebar navigation make the information easy to understand. This case study demonstrates how HTML and CSS can be used to create a clean academic portal for viewing educational information.

Case Study 17: Tourism and Heritage Information Website

The Tourism and Heritage Information Website introduces visitors to India's tourism, culture, heritage, food, festivals, and famous destinations. It includes sections for regions, historical monuments, cultural festivals, popular destinations, traditional food, a travel photo gallery, and smart travel tips. Images and information cards make the website engaging and informative. This case study demonstrates the use of HTML and CSS to build a visually rich tourism information website.
